

School IPM for Maintenance and Grounds Staff

Pest-proof your school

Reminders:

- ✎ Seal your buildings, make sure doors seal and self-close correctly. Seal around conduits, windows, gaps in masonry, etc. Eliminate any unscreened access from outside. Ensure air doors are set correctly.
- ✎ Create space around your buildings, allow a 1 foot gap between the building and any vegetation, trim trees away from walls and roof areas, ensure no irrigation of wall areas or foundation.
- ✎ Waste management, locate dumpsters at least 50 ft from the back door. Dumpster lids should be kept closed, and dumpster areas clean. Use exterior trash-cans that are elevated off the ground or placed on concrete. Trash-cans must have self closing lids, and quality liners. Never allow trash-cans to be located next to exterior doors.

Avoid pest conducive conditions:

- ☀ Clean debris out of external drainage catch areas to reduce pest harborage.
- ☀ Check escutcheon plates are in place.
- ☀ Seal around pipe-chases and conduits that enter walls or drop ceilings.
- ☀ Use high quality silicon based (elastomeric) sealants to seal small cracks and crevices. High quality concrete fillers, or steel wool to fill larger gaps.

Thank You for Caring for Our School
