The **Texas A&M Natural Resources Institute** just opened the *Texas Landowner Survey*. Released every 5 years, it seeks to understand private landowner needs and concerns in operating and managing their land.

The voluntary survey covers topics ranging *from land management, land loss and fragmentation, and landowner challenges and preferences*, all of which serve to improve efforts in private land conservation.

The mostly multiple-choice survey should take *about 20-30 minutes to complete* using a tablet, laptop or desktop computer and about 5 minutes longer using a cell phone.

An outcome of the landowner survey is finding better ways to serve Texas landowners through programming and technical guidance to meet their land management needs.

Your participation and individual responses will remain anonymous and confidential — responses will not be associated with individuals or their property and will only be presented in aggregate form.

As a token of our appreciation, for participating in our survey, you have the option of entering a voluntary **raffle to win 1 of 15 Yeti® Texas Land Trends tumblers**. ***Entry information will not be associated with your responses.***

Thank you so much for participating in our survey and for spreading the word across Texas! Your feedback will make positive impacts for Texans across the state

New! TEXAS WATER SURVEY

The **Texas A&M Natural Resources Institute** just released the new **TEXAS WATER SURVEY!!!** It is open to **ALL STATE RESIDENTS**.

Our waters provide for the daily needs of Texans, from drinking, household, and recreational uses to commercial and agricultural uses. Despite the apparent abundance of water resources, the Texas population continues to increase at a steady rate along with its water use.

Meeting the domestic water needs of a growing population coupled with various industrial, commercial, and agricultural needs can be a challenge. Our health, well-being, safety and recreational opportunities depend on healthy, accessible, and affordable water sources, as do Texas businesses.

We want to hear about your experiences with water in Texas.

The mostly *multiple choice, 20-30 minute voluntary survey* explores daily use and management of water resources, challenges and concerns like flooding and drought, and other topics to include water sources and water recreational experiences.

Your participation and individual responses will remain anonymous and confidential — responses will not be associated with individuals or their property and will only be presented in aggregate form.

Whether you are a...

- **water user** (anyone who lives in Texas and uses any water source, such as public or private utility water, groundwater – well water, surface water – river, stream, lake),
- **water provider** (someone who works for private or public water utilities, water distributors, groundwater conservation districts, or other types of water providers),
- **community leader** (elected or non-elected officials, community advocates, county commissioners, mayors, social workers, health professionals, educators, religious leaders, water planners, TWDB regional water planning groups, river authorities...), or
- **other water professional** (water utility workers, TCEQ professionals, plumbers, groundwater well drillers...)

...YOUR VOICE MATTERS.

We are very grateful for your time and participation. As a token of our appreciation for participating, we are offering a voluntary **raffle to win 1 of 15 Yeti® Texas Land Trends tumblers**. **Entry information will not be associated with your responses**. Thank you so much for participating in our survey and for spreading the word across Texas!
