

Wastewater Treatment Facilities Workgroup

Meeting Notes

2/17/2011

Workgroup Members Attending

Susie Blake, Lisa Marshall, Linda Broach, Kim Laird, Sean Rosenberry, Darrell Hartwick, Charriss York, Angela McDowell, Dawn Ryczek, Marc Reid

Discussion

The workgroup discussed the results from the activity from the February 2011 Dickinson Bayou Watershed Partnership Meeting and how the information could be incorporated in the planning process. The 9 element table was introduced to the group, which will be used as an outline for the planning process. A 9 element table is required for each management measure identified in the Implementation Plan. After being introduced to the 9 element table, the workgroup began identifying potential management measures and information that is needed to develop the components of the 9 element table. After describing the 9 elements table, the group discussed the example tables pulled from the H-GAC Bacteria Implementation Group's Draft I-plan. The first two columns (Causes/Sources and Implementation Activities and Targeted Critical Areas) were discussed and will be addressed more thoroughly in future meetings.

Action Items

- Linda Broach - Gather information on MS4 permit coverage
- Kim Laird – Gather information on regionalization guidelines and TMDL reduction requirements
- Lisa Marshall – Share information gathered in the Oyster Waters workgroups (WWTF and OSSF)
- Susie Blake – Gather information on League City's requirements for OSSFs (300' requirement)
- Marc Reid – Begin organizing information in the 9 elements table.
