The U.S. Dairy Education and Training Consortium started in 2008 as a program to provide modern dairy herd management practices and procedures to interested university students. Although the dairy industry was and is continuing to increase in the southwest and midwest, few universities were developing dairy courses to meet the needs of the rapidly changing management need of modern herd management. Since the start of the program, 904 students have applied with 610 students having completed the program. Our students come from 61 universities located across the US. The intensive 6 week course is held in Clovis, NM, which is located in the 3rd largest US milk shed, eastern New Mexico and the Texas panhandle. This location allows us to have access to modern dairy facilities and milking systems, which include robotics facilities as well as other precision management programs, which are becoming more relevant in modern dairy herd management. Major subjects that are covered include; reproduction, nutrition, genetics, young stock, transition cow, mastitis and machine management, heat abatement, precision management/robotics and facilities. The program is divided into 2 sessions. Session 1 is intended for students with no dairy experience while session 2 provides for training in modern dairy management practices. Our faculty comes from across the US and are experts in their respective fields. The program is completely funded through agribusiness support. Through their generous sponsorships, students are able to attend the consortium at virtually no expense. The consortium also counts toward a student's degree plan at some universities. A 2022 survey revealed 81% of the students returned to some form of agriculture for employment and 52% of all respondents returned to a dairy or dairy related operation. Our program does educate the next generation of agricultural professional.

**Major:** Animal Science - Science / Minor in mathematics  
**Expected / Graduation Date:** Spring 2025

**Career Goals:** I've dreamed about being a veterinarian for as long as I can remember. I'm currently wanting to become an exotic vet in order to help educate owners and help mistreated animals, but I would like to help as many animals as I can regardless of species.

**Major:** Animal Science - Production  
**Expected / Graduation Date:** Spring 2024

**Career Goals:** I plan to pursue a teaching certificate as an ag teacher. I strive to teach future generations about the importance of agriculture. The dairy consortium has highlighted the prosperous labor of producers, which has only deepened my appreciation for the agricultural field, and everyone involved.
