PLANT ID

Dr. Dale Rollins, Texas A&M AgriLife Extension Service in San Angelo, Texas, has coined what he calls Rollins's Rules of Plant Succession:

#1. Know your plants
#2. Know how to manipulate them

PLANT ID

The ability to know, or identify, plants allows us to assess many important rangeland or pasture variables that are critical to proper management: range condition, proper stocking rates, forage production, wildlife habitat quality, and rangeland trend, either upward or downward.
